1920

REPORT

RELATIVE TO THE DEATHS

Births, Marriages and Deaths

IN THE

PROVINCE OF ONTARIO

FOR THE

Year Ending 31st December

Printed by  
THE RYERSON PRESS.

*To His Honour the Lieutenant-Governor of the Province of Ontario.*

MAY IT PLEASE YOUR HONOUR:

I herewith beg to present for your consideration the Fiftieth Annual Report of the Registrar-General, relating to the Registration of Births, Marriages and Deaths in the Province of Ontario, during the year 1919.

Respectfully submitted,

H. C. NIXON,

*Registrar-General of Ontario.*

SIR:—

I have the honour to submit for your approval the Fiftieth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1919.

I have the honour to be, Sir,

Your obedient servant,

A handwritten signature in cursive script, reading "John M. Bullough". The signature is written in dark ink and is positioned above the typed name of the signatory.

*Deputy Registrar-General.*

TO HON. H. C. NIXON,

*Registrar-General of Ontario.*

# REPORT UPON

## Births, Marriages and Deaths

### FOR THE YEAR 1919

The Fiftieth Annual Report of Vital Statistics for the Province of Ontario is herewith presented.

#### POPULATION.

The estimated population for the year 1919 is, 2,837,425. This is an increase of 1.4 per cent. over that estimated for the preceding year. The population is divided as follows: In the cities, 39.0 per cent.; in the towns, 5.2 per cent.; and in the rural municipalities, 55.7 per cent.

#### BIRTHS (EXCLUDING STILL BIRTHS).

A comparison of the birth rate for 1918 and 1919 is shown in the following table:

	1919	Ratio	1918	Ratio
Entire Province .....	62,774	22.1	64,729	23.1
Cities ..	26,237	23.6	26,903	24.9
Towns (5,000 pop. and over) .....	4,180	21.3	4,367	29.3
Rural ..	32,357	20.4	33,459	21.3

Compared with 1918 there is a decrease of 1,955 births. This is equivalent to 3.2 less than the number registered in 1918. The rate per 1,000 of population is 1.0 less than that for the preceding year and 1.23 less than the rate for the decade, which was 23.34. The rates for the four decades, 1880-1919, are as follows:

1880-1889 .....	24.47	1900-1909 .....	24.78
1890-1899 .....	22.00	1910-1919 .....	23.34

There were 32,999 male and 29,775 female births, or 110 male to 100 female births.

There were 1,241 illegitimate births, or 19.8 per every 1,000 births. This rate is 1.6 per 1,000 higher than for the preceding year although the actual number was less by 122. The rate of illegitimacy for the decade is as follows:

1910 .....	21.1	1915 .....	21.9
1911 .....	20.7	1916 .....	20.9
1912 .....	21.3	1917 .....	19.5
1913 .....	21.6	1918 .....	18.2
1914 .....	22.3	1919 .....	19.8

Mean rate 20.73 per 1,000 births.

(See page 18 for diagram showing birth rate for 40 years.)

MULTIPLE BIRTHS (EXCLUDING STILL BIRTHS).

There were 729 pairs of twins comprising 758 boys and 700 girls. There were 9 cases of triplets, 17 of them being males and ten females.

As is usually the case, there were more children born in March than in any other month during the year. The month of July showed the lowest number of births.

MARRIAGES.

During the year there were 26,328 marriages, being a ratio of 9.3 marriages, or 18.6 persons married per 1,000 of population. This was an increase of 6,803 marriages and is the largest number and the highest rate since the year before the war. It does not, however, reach the level for the decade prior to the war. The mean ratio of marriages per 1,000 population for the decade ending in 1913 was 9.7 and for the five years immediately preceding the war, i.e., 1909-1913 the rate was 10.4.

CONJUGAL RELATIONS.

	Number of Marriages between									Total Marriages
	Bachelors and			Widowers and			Divorced Men and			
	Spinsters	Widows	Divorced Women	Spinsters	Widows	Divorced Women	Spinsters	Widows	Divorced Women	
Province .....	23,960	498	7	989	817	12	29	10	6	26,328
Cities .....	12,982	350	6	591	470	10	24	6	5	14,444
Towns .....	1,693	28	.....	50	53	1	2	1	.....	1,828
Rural Municipalities	9,285	120	1	348	294	1	3	3	1	10,056

First and subsequent marriages, Number per 1,000 marriages.

	Men		Women	
	First	Subsequent	First	Subsequent
1913.....	915	85	930	70
1914.....	914	86	941	56
1915.....	937	63	953	47
1916.....	944	56	958	41
1917.....	931	69	956	44
1918.....	921	79	945	55
1919.....	930	70	949	51

Unfortunately the manner of compilation of marriage statistics prior to 1913 did not include a compilation which would allow such an analysis as the foregoing.

The foregoing table is too brief to allow definite conclusions. It may be noted, however, that the number of men who marry more than once is greater than the number of women.

	Bachelors who Married			Widowers who Married			Divorced Men who Married		
	Spinsters	Widows	Divorced Women	Spinsters	Widows	Divorced Women	Spinsters	Widows	Divorced Women
1913.....	23,768	803	124	1,249	813	44	94	30	73
1914.....	21,468	651	31	1,294	730	10	37	10	14
1915.....	21,551	435	21	833	641	6	14	2	3
1916.....	21,697	350	13	720	592	5	17	4	3
1917.....	19,773	247	4	763	682	7	15	3	5
1918.....	17,622	334	15	802	721	4	18	5	4
1919.....	23,960	493	7	989	817	12	29	10	6

The foregoing table shows the conjugal conditions for the seven years 1913-19.

It would appear from this that more widowers marry widows than do bachelors, while more bachelors marry divorced women than do widowers. Divorced men show a preference for spinsters.

The sudden decline in the number of divorcees, married in Ontario, is due to stringent legislation enacted in 1913 to combat the large numbers of marriages in the border towns. This has had the effect of preventing the influx of divorced people from the United States seeking to be married in Ontario.

#### MARRIAGES BY DENOMINATIONS

Denomination	Total	Bride-grooms	Brides	Number and % who intermarried	Number and % who contracted mixed marriages
Anglican.....	11,775	5,815	5,960	7,380=61.85	4,395=38.15
Presbyterian.....	11,266	5,814	5,452	6,798=59.48	4,468=40.52
Methodist.....	13,603	6,733	6,870	8,884=65.32	4,719=34.68
Roman Catholic.....	9,213	4,626	4,587	7,972=86.55	1,241=13.45
Baptist.....	2,917	1,387	1,530	1,374=47.09	1,533=52.91
Congregationalist.....	289	154	135	88=30.44	201=69.56
Lutheran.....	1,206	615	591	860=71.30	346=28.70
Evangelical Association.....	221	94	127	132=59.72	89=40.28
Hebrew.....	708	363	345	684=96.60	24= 3.40
Salvation Army.....	224	101	123	174=77.67	50=22.33
Others.....	1,219	616	603		
Not given.....	15	10	5		

The above table gives an analysis of intermarriages by denominations. It indicates that the larger the number of adherents to any religious denomination the less do they intermarry among themselves. This is contradicted, however, year after year by those claiming themselves to be Baptists and Congregationalists.

The following allows a comparison of the marriages and the ratio per 1,000 of population in the Province and various classes of municipalities for the current year as well as the present.

	1919	Ratio	1918	Ratio
Province .....	26,328	9.3	19,525	6.9
Cities .....	14,444	13.0	10,483	9.7
Towns (5,000 pop. and over) .....	1,828	12.3	1,363	8.8
Rural municipalities .....	10,056	6.0	7,679	4.8

(See page 18 for diagram showing marriage rate for 40 years.)

## DEATHS.

The number of deaths registered in the year 1919 is 34,010. This number is less by 9,028 than for the previous year. It represents a decline of 21 per cent. of the number registered in 1918.

The following table shows the comparison:

	1919	Ratio	1918	Ratio
Entire Province .....	34,010	11.9	43,038	15.3
Cities .....	14,238	12.8	18,771	17.3
Towns (5,000 pop. and over) .....	2,166	14.5	3,241	21.7
Rural municipalities .....	17,606	11.1	21,026	13.4

The ratio per 1,000, of population has fallen from 15.3, in 1918, to 11.9, i.e., a reduction of 3.4. This brings the rate more nearly "normal," but is yet 0.9 per 1,000 of population higher than the rate for the decade. Table 6 shows the number of deaths and rate per 1,000 of population for the decade.

The following are the ten highest causes of death for the year:

		Ratio per 100,000 of population	% of total deaths
Organic heart diseases .....	3,240	114	9.5
Influenza .....	2,522	89	7.4
Pneumonia .....	2,353	83	6.9
Tuberculosis .....	2,215	78	6.5
Cancer .....	2,182	77	6.4
Cerebral hæmorrhage .....	1,554	54	4.5
Diseases of the arteries .....	1,297	45	3.8
Infantile diarrhœa .....	967	34	2.8
Bright's disease .....	918	32	2.7
Broncho-pneumonia .....	717	25	2.1

(See page 18 for diagram showing death rate for 40 years.)

## INFLUENZA (10).

The number of deaths from influenza were 2,522, being at the rate of 89 per 100,000 of population. This number is 34.3 per cent. of the number which occurred in 1918.

During the period of the epidemic, i.e., between October 1st, 1918, and March 31st, 1919, the number of persons whose death is ascribed to "Flu" was 10,021. This number includes not only those of which influenza was the sole cause but also those of which influenza was one of two or more named causes. The total deaths from all causes during this six months in which the epidemic raged was 28,145. Of these 35.6 per cent. were from influenza, either alone or with pneumonia. The rate of deaths per 100,000 of population for the years 1918 and 1919 for influenza is 175. Confining ourselves to the six months' period, the ratio jumps to the astonishing one of 711 per 100,000 population. There has been nothing to compare it to nor to compare with it in the history of the Province. The city municipalities contributed 42.5 per cent.; the towns of 5,000 population 9.5 per cent., and the rural municipalities 48 per cent.

## PNEUMONIA (92).

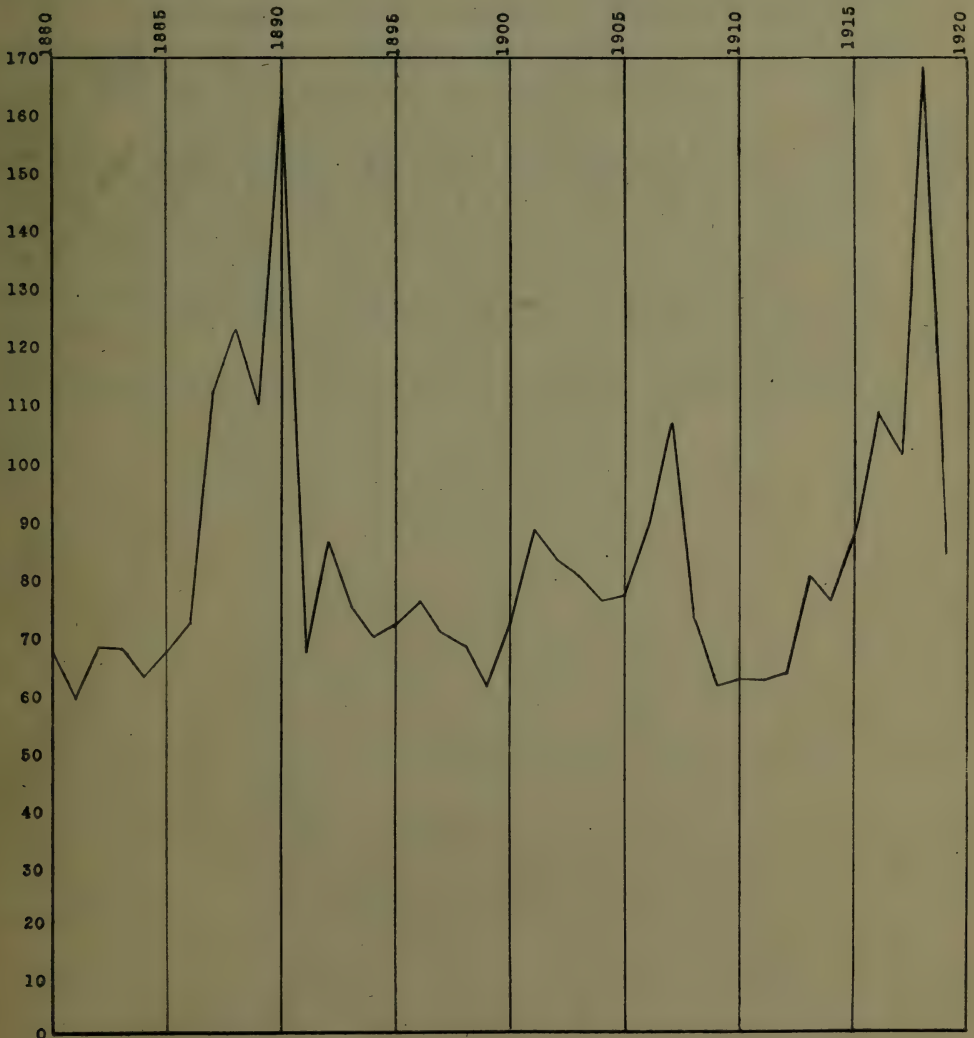

This cause of death, always high, has fallen from 166.5 per 100,000 of population in 1918 to 82.9 in 1919. This is the lowest rate in five years. The rate for the decade are as follows:

	Number	Rate
1910 . . . . .	1,558	66.5
1911 . . . . .	1,568	66.0
1912 . . . . .	1,629	63.0
1913 . . . . .	2,076	77.4
1914 . . . . .	2,009	73.0
1915 . . . . .	2,352	84.9
1916 . . . . .	2,912	105.6
1917 . . . . .	2,763	99.7
1918 . . . . .	4,660	166.5
1919 . . . . .	2,353	82.9

The following diagram shows the variations of this cause of death for the past forty years.

DEATHS from PNEUMONIA--ONTARIO  
Ratio per 100,000 of population.

Two particularly high peaks will be noted: that occurring in 1890 and that in 1918. The former is the result of an epidemic of la grippe and lack of care in classifying the actual cause of death. Many deaths were reported as "pneumonia" or "bronchitis," one of these being the immediate cause, whereas "influenza" was the primary cause. Also bronchitis is included in this peak, these two causes being classed together in that year. The second peak is due to the epidemic of influenza in 1918.

CANCER (39.45).

This cause of death has claimed 2,182 victims, this being the greatest number in any one year with the exception of 1917, when 14 more deaths were recorded. The rate (76.9) per 100,000 of population is also the highest, with the one exception, when it was 79.3.

The following are the number of deaths from cancer during the decade, and the distribution of deaths by per cent. in the three classes of municipalities.

	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919
Total number .....	1,587	1,602	1,778	1,806	1,872	1,982	2,012	2,196	2,103	2,182
Cities.....	35.9	38.6	39.0	42.0	43.8	40.9	42.8	46.6	43.0	45.2
Towns.....	6.3	7.1	7.7	6.0	6.0	5.2	6.4	5.8	6.3	5.6
Rural.....	57.7	54.3	53.3	52.0	50.2	53.9	50.7	47.5	50.7	49.1

There is an upward trend in the city municipalities and a downward in the rural. This may be, and likely is, due to sufferers coming into the cities for hospital treatment.

The following diagram shows the ratio of deaths per 100,000 of population for forty years.

## DEATHS FROM CANCER - ONTARIO.

Ratio per 100,000 of population.

Walter F. Willcox, Ph.D., LL.D., Professor of Economics and Statistics in Cornell University, in an exhaustive study on "The Alleged Increase of Cancer" concludes with these words:

"The cumulative evidence that improvements in diagnosis and changes in age composition explain away more than half and perhaps all of the apparent increase in cancer mortality rebuts the presumption raised by the figures and makes it probable, although far from certain, that cancer mortality is not increasing."

It is generally conceded that cancer is increasing. Much can be done to prevent this increase by the spread of education along public health lines. If the public could be impressed with a knowledge of the early signs of cancer, the so-called pre-cancerous conditions, and induced to have such conditions remedied by legitimate treatment, without delay, the death rate and suffering from this affection

could be greatly lessened. There is perhaps no other disease wherewith quackery plays its rapacious role to such an extent. All sorts of irregular practitioners promise the most miraculous cures in cancer cases. They work a double fraud upon their victims in that they not only take the money of these unfortunate people but, by the loss of time involved, prevent them obtaining early and scientific treatment. It is high time that the legislature gave some adequate protection to the public against the fraud and quackery practised by all sorts of so-called doctors.

### INFANTILE DIARRHŒA (104).

The number of deaths reported from diarrhœa and enteritis (104) embraces deaths under two years of age. The number was lowest in 1917, when 663 were reported; this low mark made a record. An increase was reported in 1918 and a further increase in 1919.

	Total deaths under 2 years from D. & E.	Deaths under 1 year	Deaths, 1 year and under 2 years
1910.....	1,374	1,239	135
1911.....	1,367	1,188	179
1912.....	1,146	979	167
1913.....	1,993	1,751	242
1914.....	1,215	1,075	140
1915.....	1,189	999	190
1916.....	1,218	1,026	192
1917.....	663	556	107
1918.....	845	719	126
1919.....	967	848	119

### INFANT MORTALITY.

The number of infants under one year of age who died during the year is 5,999, being 95.5 per 1,000 births. With the exception of 1917, this is the lowest rate during a period of forty years. Of 34,010 deaths registered 17.6 per cent. are those of infants. Table 13 will show the number of deaths and the causes. The various municipalities reported these deaths as follows: Cities, 2,881 or 48 per cent.; towns (5,000 population), 462 or 7.7 per cent.; rural, 2,656 or 44.3 per cent.

	Deaths 0-1 per 1,000 births, Province.	Cities and Towns.	% which occur in urban muni- cipalities.	% which occur in rural municipali- ties.	Deaths 0-1 (excluding diarrhœa & enteritis), per 1,000 births.
1910.....	119.4	164.9	51.0	49.0	97.0
1911.....	114.4	147.6	53.3	46.7	93.4
1912.....	110.3	138.3	57.2	42.8	93.6
1913.....	117.6	141.1	57.7	42.3	90.5
1914.....	103.2	117.9	56.3	43.7	86.9
1915.....	102.0	112.7	51.3	48.7	87.1
1916.....	107.2	123.2	55.6	44.4	93.0
1917.....	92.1	101.3	54.3	45.7	83.3
1918.....	98.5	114.7	56.0	44.0	87.8
1919.....	95.5	109.9	57.0	43.0	82.0

The last column in the foregoing table indicates how low our infant mortality rate might be if diarrhoea and enteritis as a cause of death could be wiped out.

The following diagram shows the infant mortality rate (upper curve) for forty years and the rate of children under one who died from diarrhoea (lower curve) in the same period. It will be noted how closely the latter follows the upper, thus emphasizing the foregoing statement.

INFANT MORTALITY--ONTARIO.  
Ratio of Deaths under one year per 1000 Births.

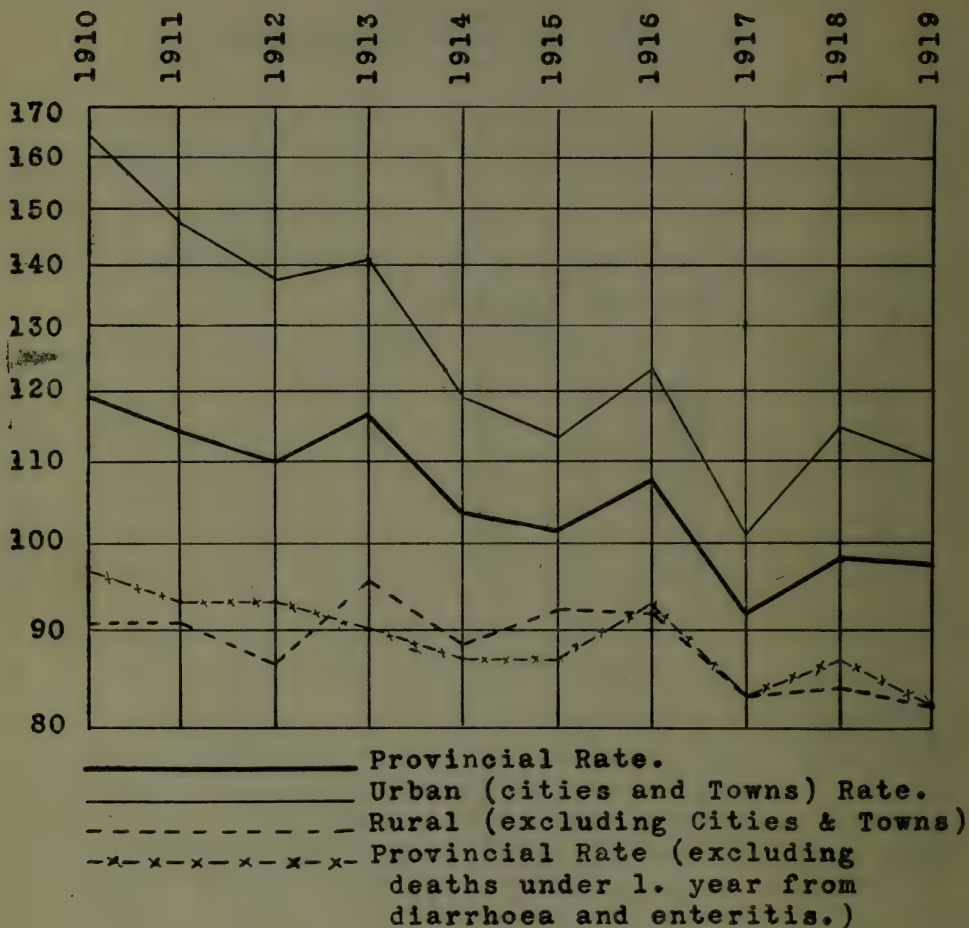

Upper curve shows rate of infant mortality from all causes.  
Lower curve shows rate of infant mortality from diarrhoea.

The following diagram shows a comparison of rates between the various classes of municipalities, also a curve is shown which indicates how deaths of infants would show, were diarrhoea eliminated.

### INFANT MORTALITY.

Deaths of Infants under 1 year per 1000 births.

## TUBERCULOSIS (28-35).

The number of deaths reported from tuberculosis, all classes, is 2,215 which gives a ratio per 100,000 of population of 78. Both the number of deaths and ratio are the lowest in the history of the Province and speaks volumes for the good work being done, not only by the Province but by many other organizations, in combatting the disease.

The following analysis shows distribution, ratio, etc.:

Cities .. 785, being 35.4%, a ratio of 70 per 100,000 of pop.  
 Towns . 131, being 5.9%, a ratio of 88 per 100,000 of pop.  
 Rural . 1,299, being 58.7%, a ratio of 82 per 100,000 of pop.

## DEATHS IN ONTARIO FROM TUBERCULOSIS BY AGES, 1910-1919.

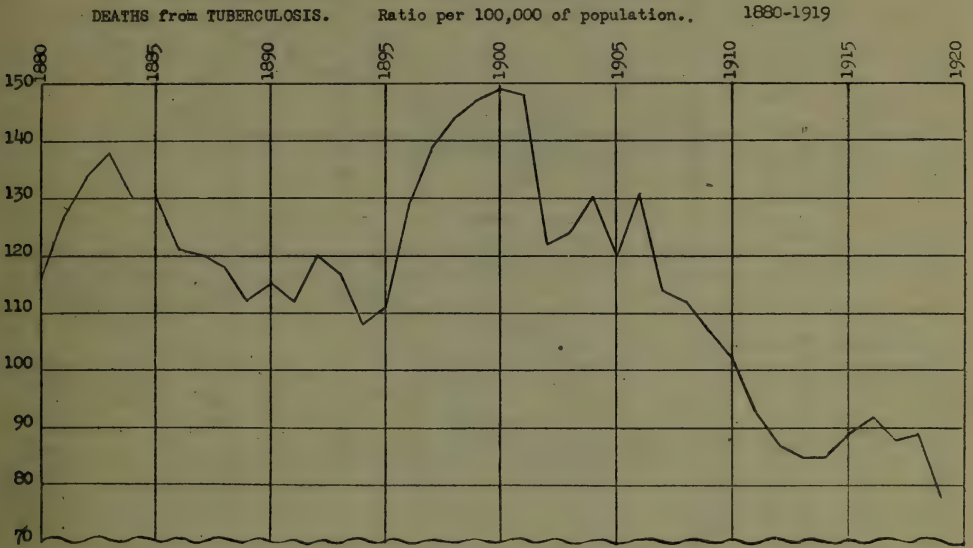

Year.	Total.	Ratio per 100,000	Under 5 years.					5-9	10-14	15-19	20-29	30-39	40-49	50-59	60-69	70-79	80 & over.	Not stated.	Total deaths from all causes.
			0-1	1	2	3	4												
	23,747		539	364	235	142	156	472	615	1,893	6,496	4,914	3,127	2,177	1,514	684	135	294	341,323

The accompanying diagram shows the rise and fall of this disease. The downward trend is quite decided notwithstanding the three slight increases in the last six years.

In viewing this diagram it must be remembered that the lowest index is 70. If, therefore, it is desired to obtain a correct idea of the rate per 100,000 of population, the lower part should be extended to the zero line. The diagram is published to show primarily the steady decline in the rate since 1900. This decline is no doubt due to the extensive efforts on the part of the Local Boards of Health in conjunction with the Provincial body, as well as the efforts on the part of private and public individuals and institutions in combatting this disease. Such efforts are mainly treating those affected, instructing those exposed to the disease in caring for themselves, and educating those not exposed how to live so as to strengthen their resistance and keep well.

DIAGRAM SHOWING BIRTHS, MARRIAGES and DEATHS in ONTARIO.  
Ratio per 1000 of population.

Ratios per 1000 of population, 1910-1919

TABLE No. 1.
